

Minha R. Ha is a PhD Candidate in Mechanical Engineering, Lassonde School of Engineering. She has a multidisciplinary background in the sciences and education research, and is conducting research on the socio-technical knowledge integration in engineering design. Her work experience in student leadership, faculty development, and engineering ethics education has led her to seek ways to empower young people in engineering to bring their whole selves to the work they do. She is a regular volunteer in the Korean Canadian community, and also has been involved with Alpha Education to raise public awareness of the WWII history in the Asia-Pacific relating to ‘comfort women.’ She enjoys leading workshops in the Let’s Talk Science events, encouraging both boys and girls to engage in the sciences. She is also passionate about teaching undergraduate students to think critically and creatively about technology’s impact on society.
